Summary

Setting:	Kurihara, northern Japan
Start Date:	2008
End Date:	2013
Participants:	590 individuals aged 75-95 years
Assessment Schedule:	Baseline and follow-up between 3 and 5 years later
Measures:	Baseline measures included the CDR and dementia diagnosis, neurobehavioural testing, and MRI. Cognitive tests were the MMSE, Trail Making Test A, and the Digit Symbol Substitution Test. The follow-up measure was diagnosis of dementia using the AD8 Dementia Screening Interview
