

Our vision

The Clinical Research Unit (CRU) is your gateway to connect and collaborate with UNSW's rich ecosystem of expertise and infrastructure.

Our aim is to partner with researchers so that together, we shape the future of medicine through transformative clinical research and trials.

We support clinical researchers across all stages of a project with operational and academic expertise, systems and tools to conduct high quality and impactful research efficiently and in accordance with recognised national and international best practice guidelines (ICH-GCP).

Our testimonials

"It was very helpful to have the grant reviewed by a number of people experienced in these types of grants and from different areas of expertise."

"Helped me understand NHMRC reviewers' comments and what could be improved."

Partnership model

Operating on a partnership model across the UNSW network and beyond, interested researchers are invited to connect with CRU at pre-award stage. Our pre-award service offers comprehensive feedback to enhance project design, quality and feasibility maximising the chance of funding success.

Post-award partnership is tailored according to project needs with CRU experts embedded within the project teams. This partnership can commence at any stage of the project from start up to delivery and close out. Partners can access resources and tools to enhance project success.

We are committed to advancing the skills of academic and operational staff to conduct innovative research, including large-scale adaptive platform trials.
